## 4.5 Woodland Corridor

Location Plan

# 4.6 Woodland Gardens

Nestled in the eastern most corner of the site the woodland gardens respond to a naturally occurring depression in the landscape before unfolding onto the adjacent woodland where the dingle way terminates. This natural setting and borrowed landscape creates somewhat of a secret garden.

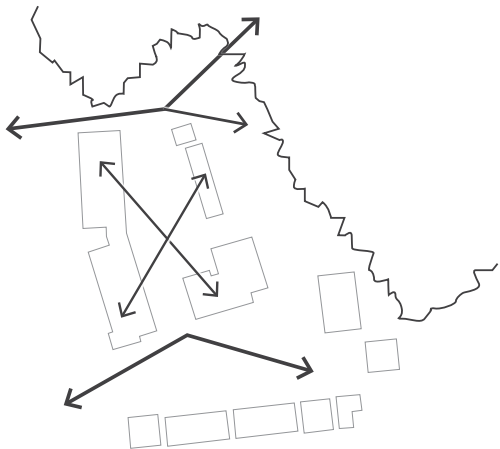

Dropping away as an open pasture land crafted out of wildflower meadows to provide a kickabout space. The apartments themselves take advantage of this grade change with a semi sunken podium car park. The communal space above replicates the design language throughout the site, using crafted mounds of soil to create depth for tree planting and enclosure.

Play on the podium garden has been designed throughout, with a central gathering area located between the split levels for BBQ's or events or just sitting.

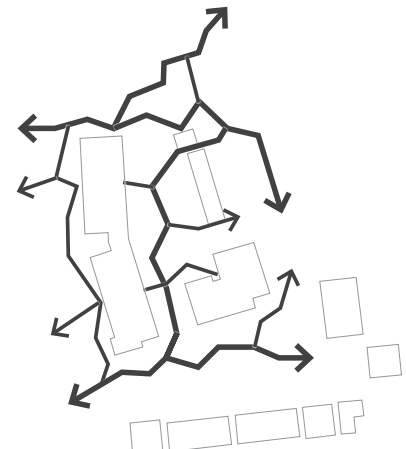

The surrounds of the woodlands replicate the idea of glades and meadowlands on the periphery of a woodland, the slopes integrate landform and undulations for interest whilst additional depressions are incorporated to capture rainwater and enhance opportunities for habitat creation.
